TurnKey Internet, Inc. Begins Data Center Expansion in New York's Tech Valley

LATHAM, NEW YORK (July 30, 2013) – Sustainable IT solutions provider TurnKey Internet, Inc. announced today the expansion of their Latham, New York data center. Just 15 months after opening their flagship data center, TurnKey Internet will be installing their next phase of additional equipment, floor space and staffing to further develop their high-tech, cloud-based infrastructure. This comes in part from their funding received from New York's energy development fund - NYSERDA.

"Because of the distinctive design within our green and sustainable data center- located in the heart of New York's Tech Valley- we have seen exponential growth and non-stop demand for the expansion within our facility and with our cloud-based services," said CEO, Adam Wills. "We're excited to announce that we are ahead of schedule with our expansion and that this will allow us to increase our facility's total capacity by 50 percent."

Using equipment like their cold-containment pods, which uses the highly energy-efficient SmartAisle™ technology, TurnKey Internet has proved to be a leader in green-IT. In the past year, they teamed up with Energy Star and became one of two Energy Star certified data centers in the state of New York. TurnKey Internet was also approved to be a part of the ReCharge New York program in March 2013. The program, created by New York's Governor Cuomo, was set in place to help companies receive clean, hydroelectric energy. With the use of their green-technology, their solar-panel roof system, and the hydroelectric power, TurnKey Internet's data center uses 100% renewable energy.

About Turnkey Internet

Founded in 1999, TurnKey Internet, Inc. is a full-service green data center and leading provider of sustainable web hosting and IT solutions.
